**The welding of thin gauge aluminium roof materials was pioneered by Melvyn Rowberry in the early 1980s – and this early work has resulted in one of the major success stories of modern British construction, by creating an ‘industry within an industry’ which contributes around £12 million to the UK economy annually.**

**The Rowberry name is well-known for integrity, quality and attention to detail throughout the UK and Europe.**

M.R. (Site Services) Ltd was formed to take advantage of this unparalleled experience, and we are now appointed by Euroclad, manufacturers of one of the UK’s leading roofing systems, as their welding partner.

While aluminium roofing represents a large part of our business, we continuously review our offer to customers, and have embarked on an extensive programme of new product development. We design and manufacture **tapered and cranked sheets, gutters and rainwater/weather systems** as well as a range of high-specification **Quantum®** products which provide clever solutions to architectural problems.: **Walkways, Ladders, Handrails, Snowguards, Leafguards** and **Access Hatches.**

We also supply and install **Roll-A-Flex®** the weld-free alternative for aluminium and steel roofs.

Founded in 1981 **Euroclad** has consistently invested in people and technology to satisfy customer needs and maintain its position at the forefront of the metal roofing and cladding industry.

Since 1981 Euroclad has launched over 60 new products and systems with countless derivations of standard systems.

As requirements have changed over the years even more products have been developed, sometimes a completely new offering to fulfil a specific need, other times to improve on established technology.

Euroclad roofing systems include **Euroseam** Standing Seam systems; **Elite** Secret Fix and Profiled systems and **Vieo** Traditional Seam system.
